

REI PRODUCT INFORMATION

PACKS

QUICK TIPS

Good fit is a must: Let an REI sales specialist help fit you.

Choose a pack with a capacity suited to your usual trip length and personal gear preferences. Use our categories as a guide.

A fixed suspension can save weight; an adjustable suspension can provide a customized fit.

FIT: THE MOST IMPORTANT FEATURE

Ask an REI fit specialist to measure your torso length. It runs from the shoulders (at the upper vertebra that protrudes visibly near the top of the spine) to the top of the hip bone. Waist/hip sizing is another factor to consider.

Options: Packs with adjustable suspension systems let you fine-tune a pack's torso fit. Fixed-suspension packs are less complex and lighter than comparable adjustable models.

Women-specific packs: On these models, shoulder straps and hipbelts are modified specifically for women, and torso lengths are shorter. Men with narrow frames sometimes find these packs are also a good fit for them.

BACKPACK BASICS

A pack should put most of the load where it can be efficiently carried: on your hips. In addition to a padded hipbelt, most pack suspension systems offer padded shoulder straps, load-lifter straps and a sternum strap. Most backpacks today use an internal frame. An internal frame's body-hugging design boosts balance and freedom of movement—great for multipurpose use (hiking in rough terrain, scrambling, mountaineering, skiing).

PACK CATEGORIES

REI categorizes packs by trip length, based on each pack's gear capacity and suspension system. Look at larger packs if you're a haul-it-all type; go smaller if you aim to pack light.

Some packs are available in multiple sizes. In these cases, our chart lists the specs for the regular- or medium-size model.

Extended trips: These packs hold more than 70 liters (4,200 cu. in.) of gear.

They feature a substantial suspension and ample load support, suitable for backpacking trips of a week or more or for cooler seasons when you may need to carry lots of clothing.

Multiday: This broad category includes packs with 40–70 liters (2,400–4,200 cu. in.) of gear capacity. They'll comfortably haul medium to moderately heavy loads; for most hikers, they make a fine choice for 2- to 5-day trips.

Technical daypacks: Designed for trail use, these packs can tote the 10 Essentials and more. Some are set up to haul climbing tools or snowsports gear. Many offer pockets for water bottles and/or a sleeve for a hydration reservoir (usually sold separately) and an exit port for its sip tube.

Hydration packs: They provide hands-free drinking while hiking or biking. Such packs include the reservoir, usually 2–3 liters in size. A 2L (70 fl. oz.) reservoir is a popular, all-purpose choice. If you're often active in warm conditions, consider a 3L (100 fl. oz.) reservoir.

MATCH YOUR PACK TO YOUR STYLE

You want to keep your pack's weight low, but without jeopardizing comfort or safety.

Individual views on comfort and weight can vary greatly. So REI divides core gear (pack, bag and tent) into four general categories. The goal: to help you build a gear system matched to your preferences.

Minimalist: Low weight overrides all other concerns (comfort, durability, convenience).

Ultralight: Gear for those willing to forego some conveniences to reduce pack weight.

Lightweight: Packs that offer a balance of useful features and low-weight innovations.

Deluxe: For "maximalist" explorers who put a priority on comfort and convenience features.

KEY FEATURES

Top load or panel load: Almost all packs feature access to the main compartment at the top of the pack or via a front panel. Top-load design minimizes weight, while panel-load design offers easy access to your gear.

Top lids: These offer extended capacity, as do expansion collars. Some lids double as waistpacs for day trips from base camp.

Hydration compatibility: Most packs have a compartment for a fluid reservoir (usually sold separately) and a port for its sip tube.

Hipbelts: Comfort and adjustability are key. Many packs have pockets on the hipbelt for fast access to energy food, digital camera, GPS receiver and items of similar size.

Load support: Aluminum stays are often used to transfer the weight of the packbag to the hipbelt. Lightweight tubular aluminum designs have become increasingly popular in recent years. Some packs use a stiff plastic (HDPE) framesheet for support. (It also shields backs from protruding items.) Other packs offer a stay/framesheet combo.

Ventilation: Many frame designs use taut, suspended mesh to create an air space behind your back. The result: increased comfort and airflow that cools your back.

Motion: Some packs offer dynamic hipbelts that readily respond to a wilderness traveler's range of movement.

ACCESSORIES

- Some add-on accessory pockets are sized to hold a GPS unit or camera.
- Stuff sacks and mesh bags organize items inside big compartments.
- Rain covers shelter your pack and prevent lashed-on gear from snagging on brush.
- Trekking poles help you maintain balance, let you add a little thrust when hiking uphill and ease jolts to joints during descents.

THE 10 ESSENTIALS

Keep your essentials packed so you are prepared for fun and safe travel.

1. Navigation—Map, compass, possibly a GPS.
2. Hydration—Water, container; and either filter, or treatment method.
3. Nutrition—Food and extra food.
4. Sun Protection—Sunscreen, sunglasses, hat, lip balm with SPF.
5. Insulation—Hat and gloves; lightweight jacket; extra layers.
6. Warmth—Lighter or matches. Fire starter or stove and fuel.
7. Illumination—Headlamp or flashlight, with extra batteries.
8. First Aid—For you and your gear: bandages, knife, medicine, duct tape, zip ties, etc.
9. Shelter—Emergency blanket or shelter in case you are out longer than expected.
10. Whistle—Great for communication or emergency signals.
